

Background

Topa Financial Center is completing campus-wide technology solutions that will provide its tenants with business critical network services. Topa Financial Center has teamed with SystemMetrics Corporation to provide these services which are engineered with performance, security, reliability, and value in mind. The campus is being refitted with fiber-optic and Category 5 cabling and switching equipment to provide tenant subscribers one of the most complete managed network solutions of any building in Honolulu. The goal of this new infrastructure is to provide businesses in Topa Financial Center with a technological advantage rivaled by very few in Honolulu.

- Microsoft and Citrix Integration Solutions
- Inbound Fax Routing to E-mail
- Website Hosting, Design, and Programming
- Business Network Integration Services and Support
- 24x7x365 Support on all Services

High Speed Commercial Internet Access

Topa Financial Center's new network fiber infrastructure will provide tenants with the fastest and most reliable Internet and Wide Area Network Access available. This new fiber backbone coupled with the SystemMetrics LANTERN transport allows users to connect to the Internet at unparalleled speeds up to 100Mbps. Data transport to each tenant is delivered via an Enhanced Category 5 or Fiber Optic Cable eliminating the need for Cable Modems, Routers, and DSL Modems. Service is usually delivered within 72 hours of placing an order instead of weeks with other carriers. Best of all, this high speed Internet access is offered with the most economical pricing to provide tenants with the best value in Hawaii.

Branch Office and Residential Connectivity to Office Network

Topa Financial Center's high speed backbone will allow tenants to privately and securely connect to their office networks from both their home and branch offices. Residential and branch offices can be tied into the main office network and operate as if on the same Local Area Network (LAN). The Topa Financial Center network infrastructure will help you remain connected to your home or branch office economically and with the greatest degree of performance and reliability. SystemMetrics Corporation can also engineer Virtual Private Networks (VPN) for connectivity to remote networks.

Commercial Firewall Protection

Redundant, commercial grade firewall protection will be available for tenants who utilize the building's network backbone. The network infrastructure is equipped with redundant Cisco enterprise firewalls that can provide superior protection for those tenants that require this optional service. Protection is provided without adding equipment to the customer premises.

Unified Messaging Services

In conjunction with the data services, unified messaging offerings will be available for tenant access. The unified messaging offerings include desktop faxing, fax/email integration, and voicemail-to-email integration. These solutions vary as the solutions are customized to each tenant's business requirements.

Email Hosting

Email hosting will also be available to Topa Financial Center's tenants. This mail hosting solution is perfect for those companies that rely on email communications. Multiple email platforms are available to include direct Outlook access, Web Access, POP, and SMTP services. This allows remote users to view their mail using a variety of methods based on convenience and resources available when they are on or away from their office networks. The email hosting services also include anti-virus protection to ensure that the email is safe for recipient viewing. Future offerings will include spam-filtering, list services, and event-based workflow.

Website Hosting, Design, and Programming

Need help getting your company on the web? SystemMetrics Corporation has web designers and engineers that can provide in-house service to Topa Financial Center's tenants. From e-commerce to corporate intranets, these designers and engineers can build the customized business applications of tomorrow. Website hosting is provided via redundant web and database servers located at a secured Class A datacenter.

Business Network Integration Services and Support

SystemMetrics Corporation can provide advanced, network support to Topa Financial Center's tenants. In addition to the aforementioned services, SystemMetrics Corporation can provide business network solutions such as advanced Microsoft platform integration, Cisco solution integration, datacenter co-location, Citrix thin-client integration, disaster recovery, and corporate server integration.
